PROFESSIONAL SUMMARY

Data Engineer with 3 years of experience building and optimising scalable data pipelines across cloud-native platforms. Hands-on expertise in Snowflake, Azure Data Factory, and dbt for large-scale ELT workflows and cloud data warehouse modernisation. Explored applied AI through LangChain / LangGraph-based chatbot development and vector-database-backed RAG pipelines.

TECHNICAL SKILLS

Cloud & Data Warehousing: Snowflake, Amazon Redshift, ADLS Gen2, Azure Blob Storage

Data Integration & ETL/ELT: Azure Data Factory (ADF), Talend, Snowpipe, Kafka

Transformation & Modelling: dbt (data build tool), Snowpark, PySpark, Pandas, SQL

AI / LLM: LangChain, LangGraph, Vector Databases (Pinecone / ChromaDB), RAG Pipelines

Languages: Python, SQL

PROFESSIONAL EXPERIENCE

Data Engineer · **Genpact** May 2025 – Nov 2025

Bengaluru, Karnataka | On-site

- Led proof-of-concept development of a domain-specific AI chatbot using LangChain (LCEL) and LangGraph, enabling stateful, multi-turn conversational workflows.
- Designed and implemented a Retrieval-Augmented Generation (RAG) pipeline integrating vector databases (Pinecone / ChromaDB) for semantic document retrieval and context-grounded responses.
- Evaluated multiple embedding models and chunking strategies to optimise retrieval precision and latency for enterprise knowledge-base queries.
- Collaborated with business stakeholders to define evaluation metrics; reduced hallucination rate by iterating on prompt templates and retrieval configurations.

Data Engineer · **Cervello** June 2023 – March 2025

- *Bengaluru, Karnataka | On-site*
- Served as a core member of the ingestion team for a large-scale data platform migration, moving workloads from Amazon Redshift to Snowflake data warehouse with zero production downtime.
- Designed and deployed Azure Data Factory (ADF) pipelines to ingest data from heterogeneous sources including S3, SFTP, FTP, monitored mailboxes, and Salesforce into Snowflake staging layers.
- Configured Snowflake Storage Integration with ADLS Gen2, enabling secure, credential-free access to cloud storage and facilitating automated Snowpipe-based continuous ingestion.
- Authored Snowpark (Python) stored procedures for in-warehouse data validation, transformation, and error-handling logic, reducing dependency on external compute.
- Built and maintained dbt models (staging, intermediate, marts) with tests and documentation, achieving full lineage visibility and enforcing data quality contracts across all ingested datasets.

EDUCATION

Bachelor of Engineering – Mechanical — Shivaji University 2020

CERTIFICATIONS

CDAC Big Data Analytics : Bengaluru 2023
